Siempelkamp 2022 fiscal year: Successful positioning, capacity fully utilized

Krefeld, May 10th, 2023 – The Siempelkamp Group can look back at a successful 2022 fiscal year: with an order backlog of more than 1.03 billion EUR, the company can report full capacity utilization and at the same time, a healthy looking order book.

Siempelkamp's order backlog surpassed the billion-euro mark in 2022, an increase of around 19.5 percent compared to the previous year. The Group's order intake also developed successfully in 2022: it amounts to 779.3 million EUR, sales amounts to 611.0 million EUR.

In 2022, Siempelkamp was able to win significant orders particularly in its core market, the wood-based panel industry. Customers represented worldwide placed orders for Siempelkamp plants in the double-digit range in all product lines. "From Turkey to Southeast Asia, from the USA to South America, we were able to impress plant operators, some of whom have been capitalizing on Siempelkamp expertise for decades now", says Dr. Martin Stark, CEO of the Siempelkamp-Group.

Long-standing existing customers, but also new customers, were impressed by the expertise and technological know-how. Among many other orders, a South-American corporation continued with their cooperation Siempelkamp that has already lasted for many years. They ordered a complete system for manufacturing MDF in 2022, as well as a short-cycle press. Intensive cooperation, a modern concept, and proven Siempelkamp quality tipped the scales in favor of this project. One of the leading wood-based panel manufacturers in Turkey also placed an order with Siempelkamp for a new particleboard plant. Here as well, service and teamwork made the difference in challenging times.

As a new customer, a US-American door manufacturer ordered two forming and press lines for producing door skins. What is in demand here is Siempelkamp's comprehensive expertise in the area of wood-based panel plants, particularly those for manufacturing thin MDF and HDF boards.

"2022 was a year of challenging conditions for our customers as well as for us, looking at inflation, supply shortages, and increased material costs. So in this context, it is even more pleasing that we continue to be trusted by wood-based panel producers represented worldwide, enabling us to implement many ambitious projects together", says Samiron Mondal, Chief Sales Officer of G. Siempelkamp GmbH & Co. KG and Managing Director of Siempelkamp Maschinen- und Anlagenbau GmbH.

Achievements like this are also based on the work of dedicated teams. In 2022, 2,794 Siempelkamp employees played an important part in the excellent positioning of Siempelkamp products and services around the world. Many projects have run smoothly in the past fiscal year, e.g., ten start-ups and twelve final inspections, based on the expertise and dedication of the Siempelkamp team.

About Siempelkamp

As a technology provider for machinery and equipment, casting and nuclear technology the Siempelkamp group has an international footprint. We are a system supplier of press lines and complete plants for the wood-based panel industry, metal forming, as well as the composites and rubber industries. With one of the world’s largest hand-molding foundries, we manufacture large cast parts at our Krefeld location; these have a total unit weight of up to 320 t. We also provide transport and storage containers for radioactive waste, and specialize in the dismantling of nuclear plants. The wood-based panel industry forms one of our central markets and our core competence: We cover the entire production process for wood-based panels – from round log and raw material handling up to storage and handling solutions for the finished wood-based panels as well as new approaches of machine learning. We provide our customers with comprehensive after sales & service throughout the entire life cycle of their plant.
